

Understanding Change Management

Clasp your hands together.

One word about change

- Mentimeter

Change in the college.....

1. Early Morning classes @ 6 30 am
2. Canteen shifts to healthy food only: salad and juice NO TEA VADA PAV ETC.
3. You and your group is separated now for project. NO FRIENDS.
4. UNIFORM compulsory on all days.
5. Exams will be open book. But very difficult.
6. Classes online. Only practical in person.

• **How will you cope? Plus and minus sides**

What?

Definition of Change Management

- **Structured approach** to shifting individuals, teams, organizations
- Change = structured transition at strategic, managerial, operating levels
- Moves from current → desired state
- Concerned with: People + Processes + Performance
- **meaning of change is important from employee's perspective as well as organization's perspective.**

Why **Change Management Matters**

- Global competition
- Technology (AI, robotics, IoT)
- Workforce diversity
- Sustainability pressures

Who?

Levels of Change

- Individual: learning new software
- Team: new collaboration methods
- Organization: restructuring, mergers
- Societal: Industry 4.0

Planned vs. Unplanned Change

Planned change

- Implementing new software
- Restructuring an organization,
- Merging with another company,
- Changing marketing strategies,
- And adopting new technologies like digital transformation

Unplanned change

- **Economic crises**, such as a sudden downturn
- **Disruptive external events**, like a natural disaster or a sudden regulatory shift;
- **Sudden workforce changes**, such as a key employee's unexpected departure;
- And **market shifts**, including rapid changes in customer demand or increased competition.

Management Functions & Change

Made with  Napkin

1 Lewin's Change Management Model 1940

Change Management Models

Lewin's Change Management Model

SBI's Digital Transformation

Lewin's 3-Step Model

- Unfreeze → Change → Refreeze

Force-field analysis

- Strategic management technique, developed by kurt lewin,
- Identifies and analyzes forces that drive change and forces that restrain it, creating a balance (or equilibrium) within a situation.
- To implement change, the analysis helps in either **increasing the strength of the driving forces** (e.G., New technology, leadership support) or **decreasing the strength of restraining forces** (Employee resistance, lack of training) to shift the equilibrium in the desired direction.

2 Kotter's 8-Step Model 1990

Focuses on the **people side of change** with 8 structured steps:

1. Create urgency
2. Form a powerful coalition
3. Create a vision for change
4. Communicate the vision
5. Remove obstacles
6. Create short-term wins
7. Build on the change
8. Anchor the changes in culture

Kotter's 8-Step Model

ADKAR Model

Developed by
Prosci founder
Jeff Hiatt in
1996

ADKAR MODEL

Real-life example (Tata Motors – Transition to EVs)

- **Awareness:** Management communicated the urgent need to shift toward sustainable vehicles due to government EV policies.
- **Desire:** Employees and stakeholders aligned with the green vision.
- **Knowledge:** Engineers trained in EV technologies and battery systems.
- **Ability:** Hands-on projects like Tata Nexon EV development.
- **Reinforcement:** Celebrated EV sales milestones, government incentives, and internal rewards kept momentum alive.

Bridges' Transition Model

- Ending/Loss → Neutral Zone → New Beginning

Weisbord's Six-Box Model

- Purpose, Structure, Relationships, Rewards, Leadership, Helpful Mechanisms

John Fisher Model

- Journey of psychological change
- Stages: Anxiety → Happiness → Fear → Guilt → Depression → Hostility → Acceptance

John Fisher Model

• Stages in Fisher's Model

1. **Anxiety** – “Can I cope?” Initial uncertainty when change is announced.
2. **Happiness** – Relief or optimism that something new might bring benefits.
3. **Fear** – Worry about personal impact (“Will I lose my role?”).
4. **Threat** – Feeling insecure as the change becomes real.
5. **Guilt** – Regret about the past or resistance to new demands.
6. **Depression** – Low energy, disengagement, “This won't work.”
7. **Hostility** – Active resistance, pushing back against change.
8. **Denial** – Pretending change is not needed or relevant.
9. **Gradual Acceptance** – Beginning to adapt, experiment, and accept.
10. **Moving Forward** – Full engagement with the new reality.

John Fisher Model Transition curve

The Personal Transition Curve
John Fisher 2012

Change Curve (Kubler-Ross) 1969

Principles of Managing the Human Side of Change

- 1. Different people react differently
- 2. Everyone has fundamental needs
- 3. Change = loss (loss curve)
- 4. Expectations must be realistic
- 5. Fears must be addressed

Principle	Explanation	Example
1. Establish a Clear and Compelling Vision	People need to know <i>why</i> the change is happening and <i>what success looks like</i> .	An Indian IT company shifting to AI tools explains: “We aim to reduce project delivery time by 25% and remain competitive globally.”
2. Secure Strong Leadership and Sponsorship	Leaders must champion change visibly and consistently.	In a public sector bank merger , the MD holds town halls assuring employees that job security and promotions remain safe.
3. Engage Employees at All Levels	Involve employees in planning and execution to build ownership.	A manufacturing firm in Pune forms cross-functional employee task forces to redesign workflow for automation adoption.
4. Communicate Consistently and Transparently	Ongoing, two-way communication reduces rumors and resistance.	A telecom company moving to 5G sends weekly updates and Q&A sessions for engineers and customer service teams.
5. Address the Human Side of Change	Recognize and support emotional reactions (denial, anger, fear, acceptance).	During railway digital ticketing upgrades , frontline staff fear redundancy → leaders provide counseling and retraining.

Principle	Explanation	Example
6. Align Organizational Systems and Structures	Processes, policies, and incentives must support the change.	A retail chain moving to online sales changes incentive policies from in-store sales to digital customer engagement.
7. Build Capabilities and Provide Support	Training, coaching, and tools are essential for success.	A hospital in Mumbai adopting electronic health records trains doctors and nurses in digital literacy before rollout.
8. Deliver Quick Wins and Celebrate Success	Early wins build confidence and momentum.	A state electricity board moving to smart meters pilots in one city → celebrates 20% reduction in power theft within 3 months.
9. Sustain and Reinforce the Change	Reinforcement ensures the change sticks in culture.	A private bank shifts to paperless processes → continues rewarding departments with highest e-document usage.
10. Be Flexible and Adapt the Approach	Change plans must evolve with circumstances.	During COVID-19 remote work adoption , many Indian firms adjusted policies to allow hybrid models instead of strict “work from home only.”

Consent to Change: 3 Facts

- 1. People reject '**bad aims**' (greed, false promises)
- 2. People can't just '**drop everything**'
- 3. Crisis is no excuse—**integrity** matters

Psychological Contract: Unwritten expectations

Made with  Napkin

Summary of Change Management

- Models: **Lewin, Kotter, ADKAR**, Bridges, Fisher, Greiner, Burke—
Litwin, Six-Box
- Principles: **10 & 5 rules of people-centered change**
- Change = technical + psychological

Personal examples

- **Merger**: training blue collar employees in adapting the new culture
- **Inclusive strategy**: Women are working now on shop floor. Sensitizing them and others about the shift.
- **Shift to EV plant**: different safety and requirements.
- **Charity hospital shifting to professional value based hosp.**

“

All change is hard at first,
messy in the middle and
gorgeous at the end.

ROBIN SHARMA

Resistance to Change

- Definition, Causes, Solutions

Employees

Management

Definition of Resistance

- Employee pushback: **rational or emotional**
- **Not always negative**

Fear of job loss, demotion, skill mismatch

- From German project to Japanese project
- Change factors for you

Psychological Factors

- Ego defensiveness
- Fear of unknown
- Low tolerance

EGO

Social & Group Factors

- Peer conformity
- Breaking of old networks

Cognitive Dissonance

- Conflicting beliefs vs. new organizational expectations

Diversity &
Inclusion Policy

"Hiring should focus only
on technical skills, not
diversity."

Organization actively
recruits diverse
candidates and promotes
inclusive practices.

Belief in traditional hiring
vs. expectation of
inclusion and equity.

1. Accept value of diverse perspectives.
2. Rationalize: "Diversity improves innovation."
3. Resist: Feel policy is unfair or tokenistic.

Symptoms of Resistance

- Absenteeism
- Low morale
- Sabotage

Constructive vs. Destructive Resistance

- **Constructive = feedback**
- **Destructive = sabotage**

Communication Strategy

- **Face-to-face > memos**

Participation Strategy

- **Involve employees in decisions**

Support Strategy

- **Training, counseling, coaching**

Leadership in Resistance

Trustworthy, communicative leaders reduce fear

Managerial Styles

Directive vs. collaborative vs. coaching

Case: Tata Motors Plant Change

Union involvement → gradual acceptance of automation

Resistance Summary

- **Causes:** economic, psychological, social
- **Solutions:** communication, participation, support

1 Textile Industry: Automation less employment. protests. from org perspective?
either ask for win win situation: learning new skills, quality control etc Room no 1 by Sakshi

2 digital world: proper map, visualize, step by step adjustment. then new machinery : supply chain move faster: try and test new machines: learning from these experts (testing group) room 2 presented by Ananya

You 5:52 PM

3 Major loss in the organization: more working hours. what we will get in return?
More breaks, may be. something extra / bonus room 3 Yash

4 Start up mid size : 6/8 moths working capital: immediate turnover.
overtime/downsizing etc. setting clear expectations imp. creative ideas. Room no 4 presented by Aditi

You 6:00 PM

5 Making change in government office. standing in line: time: document verification will be online mode. who will be benefited by this? a local cybercentre: to educate them. for faster processing etc. Room no 5 Presented Komal

Empowerment & Strategies

- Definition, Models, Applications

Definition of Empowerment

- Granting autonomy, responsibility, decision-making

Psychological Empowerment (Spreitzer)

- Meaning, competence, self-determination, impact

Dimension	Meaning in Empowerment	Application in Change Management
Meaning	The value of work goals judged in relation to one's own ideals and standards. Employees must see that the change aligns with their personal values.	Leaders should communicate <i>why</i> the change matters and link it to employees' sense of purpose (e.g., “This digital shift will help us serve customers faster and reduce stress in your daily tasks”).
Competence	Confidence in one's ability to perform work activities with skill (self-efficacy).	During change, training, mentoring, and skill-building ensure employees feel capable of handling new systems and processes (e.g., workshops on using new software).
Self-determination	A sense of autonomy in initiating and regulating one's own actions.	Change should allow employees some choice/control — e.g., letting teams decide how to implement new policies locally instead of top-down imposition.
Impact	The degree to which an individual feels they can influence strategic, administrative, or operational outcomes.	Employees must feel their voice matters — involve them in feedback loops, pilot programs, or suggestion forums during the change so they experience ownership of results.

Structural Empowerment (Kanter)

- Resources, support, information access

Job Characteristics Model

The Job Characteristics Model shows that employees embrace change more positively when their work is redesigned to enhance **skill variety, task identity, task significance, autonomy, and feedback.**

Self-Determination Theory

Self-Determination Theory (Deci & Ryan) says people are most motivated when their needs for **autonomy, competence, and relatedness** are fulfilled.

Empowerment & Innovation

- Encourages creativity, risk-taking

Strategies for Managers

- Delegation, recognition, training

Empowering Leadership

- Servant & transformational leadership

Employee Involvement Programs

- Quality circles, suggestion schemes

Case: Wipro Empowerment

- Employee-driven innovation council

Risks of Empowerment

- Overload, role ambiguity, conflict

Empowerment Reduces Resistance

- **Ownership** = less fear, smoother transition

Module Summary

• **Change → Resistance → Empowerment**
