### Course Summary:

This four-semester course is designed to equip engineering students with a comprehensive understanding of psychological principles and their practical applications in industrial and organizational contexts. Blending theory with hands-on practice, the course explores how human behavior, cognition, and mental processes influence workplace dynamics, decision-making, performance, and well-being. Across the semesters, students engage with topics such as individual and group behavior, leadership, team processes, organizational culture, cognitive biases in decision-making, conflict management, and performance prediction through psychometric assessments. The course also integrates emerging areas like behavioral economics and consumer psychology, and addresses vital concerns in occupational health, including stress management, diversity, and mental health.

A strong emphasis is placed on developing applied research skills, including training in research methods, statistical analysis, project work, and ethical research practices. Assessments are diverse—comprising written exams, oral presentations, and project-based evaluations—ensuring students build critical thinking, collaboration, and communication skills. Ultimately, the course prepares students to become psychologically informed engineers who can effectively manage human factors in technical environments, lead diverse teams, and contribute meaningfully to organizational development and innovation.

---

## Semester V

**Title: Behaviour at Workplace and Performance Management (BWPM)**

**Credits: 4**

|                                  |            |                                       |                                                                                                     |

### **Course Outcomes:**

By the end of this semester, students will be able to:

1. Analyze the factors that influence team dynamics and leadership and learn strategies for managing conflicts and change within teams.
2. Improve decision-making skills by understanding the cognitive biases in technical environments, while critically evaluating organizational culture and managing change effectively in dynamic work settings.
3. Understand and evaluate techniques of performance assessment and recommend evidence-based training interventions to improve organizational outcomes.
4. Identify key psychological factors affecting occupational health and propose strategies to promote a healthy and inclusive workplace.

| Unit | Contents                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Lectures (hrs.) |
